Notes:

- a Toxicity values for trivalent chromium used for total chromium.
 - b Total Aroclors are included in cumulative risk; PCB congeners are not.
- Numbers presented are rounded values. Sums calculated before rounding.

Abbreviations:

- Not evaluated
- CDI Chronic Daily Intake
- DDT Dichlorodiphenyltrichloroethane
- EPC Exposure Point Concentration
- HQ Hazard Quotient
- LADI Lifetime Average Daily Intake
- mg/kg-day milligram per kilogram per day
- NA Not Applicable
- NL Not Listed
- PCB Polychlorinated Biphenyl
- RfD Reference Dose
- RM River Mile
- TEQ Toxic Equivalents
- ug/kg micrograms per kilogram

Notes:

- a Toxicity values for trivalent chromium used for total chromium.
 - b Total Aroclors are included in cumulative risk; PCB congeners are not.
- Numbers presented are rounded values. Sums calculated before rounding.

Abbreviations:

- Not evaluated
- CDI Chronic Daily Intake
- DDT Dichlorodiphenyltrichloroethane
- EPC Exposure Point Concentration
- HQ Hazard Quotient
- LADI Lifetime Average Daily Intake
- mg/kg-day milligram per kilogram per day
- NA Not Applicable
- NL Not Listed
- PCB Polychlorinated Biphenyl
- RfD Reference Dose
- RM River Mile
- TEQ Toxic Equivalents
- ug/kg micrograms per kilogram

Notes:

- a Toxicity values for trivalent chromium used for total chromium.
 - b Total Aroclors are included in cumulative risk; PCB congeners are not.
- Numbers presented are rounded values. Sums calculated before rounding.

Abbreviations:

- Not evaluated
- CDI Chronic Daily Intake
- DDT Dichlorodiphenyltrichloroethane
- EPC Exposure Point Concentration
- HQ Hazard Quotient
- LADI Lifetime Average Daily Intake
- mg/kg-day milligram per kilogram per day
- NA Not Applicable
- NL Not Listed
- PCB Polychlorinated Biphenyl
- RfD Reference Dose
- RM River Mile
- TEQ Toxic Equivalents
- ug/kg micrograms per kilogram

Notes:

- a Toxicity values for trivalent chromium used for total chromium.
 - b Total Aroclors are included in cumulative risk; PCB congeners are not.
- Numbers presented are rounded values. Sums calculated before rounding.

Abbreviations:

- Not evaluated
- CDI Chronic Daily Intake
- DDT Dichlorodiphenyltrichloroethane
- EPC Exposure Point Concentration
- HQ Hazard Quotient
- LADI Lifetime Average Daily Intake
- mg/kg-day milligram per kilogram per day
- NA Not Applicable
- NL Not Listed
- PCB Polychlorinated Biphenyl
- RfD Reference Dose
- RM River Mile
- TEQ Toxic Equivalents
- ug/kg micrograms per kilogram

Notes: Cumulative Cancer Risks and HQs include total Arsenic only.
Numbers presented are rounded values. Sums calculated before rounding.
Transient EPCs calculated from samples collected year-round.

Abbreviations:

- CDI = Chronic Daily Intake
- cm = centimeter
- DAw = Dermal Absorption rate for water
- EPC = Exposure Point Concentration
- HQ = Hazard Quotient
- kg = kilogram
- l = liter
- LADI = Lifetime Average Daily Intake
- mg = milligram
- NA = Not Analyzed
- RfD = Reference Dose
- TEQ = Toxic Equivalents
- ug = micrograms

Notes: Cumulative Cancer Risks and HQs include total Arsenic only.
Numbers presented are rounded values. Sums calculated before rounding.
Beach user EPCs calculated from July samples only.

Abbreviations:

- CDI = Chronic Daily Intake
- cm = centimeter
- DAw = Dermal Absorption rate for water
- EPC = Exposure Point Concentration
- HQ = Hazard Quotient
- kg = kilogram
- l = liter
- LADI = Lifetime Average Daily Intake
- mg = milligram
- NA = Not Analyzed
- RfD = Reference Dose
- TEQ = Toxic Equivalents
- ug = micrograms

Abbreviations:

- = Not evaluated
- CDI = Chronic Daily Intake
- DDD = Dichlorodiphenyldichloroethane
- DDE = Dichlorodiphenyldichloroethylene
- DDT = Dichlorodiphenyltrichloroethane
- EPC = Exposure Point Concentration
- g/day = grams per day
- LADI = Lifetime Average Daily Intake
- mg/kg = milligrams per kilogram
- mg/kg-day = milligrams per kilogram per day
- NA = Not Applicable. Lead not evaluated by same risk assessment process.
- ng/kg = nanograms per kilogram
- PCB = Polychlorinated Biphenyls
- RfD = Reference Dose
- TEQ = Toxic Equivalents
- ug/kg = micrograms per kilogram
- WB = Whole body

Notes:

- ¹ The Native American multi-species fish diet EPCs were calculated assuming different ingestion rates for each of seven fish species, which can also be represented by that species' percent of total fish diet. The EPCs shown in the table are the weighted sums of the EPCs for the individual species based on the following percentages:
(38.4% x Salmon EPC)
+ (7.0% x Lamprey EPC)
+ (4.9% x Sturgeon EPC)
+ (12.4% x Smallmouth Bass EPC)
+ (12.4% x Black Crappie EPC)
+ (12.4% x Common Carp EPC)
+ (12.4% x Brown Bullhead EPC)
100% Native American fish tissue diet EPC.
These percentages are the ingestion rates for each species as discussed in the Portland Harbor RI/FS Programmatic Work Plan, Appendix C: Human Health Risk Assessment Approach, LWG, 2004.
- ² Whole Body Tissue EPCs are based on site-wide whole body EPCs for each of the target resident species (Smallmouth bass, Black crappie, Common carp, Brown bullhead), and the available tissue data from the ODHS sampling effort, which are: whole body Chinook salmon, whole body Lamprey, and fillet
- ³ Cumulative risk sums calculated using PCB congener data when available, and PCB aroclor data when congener data not available.
- ⁴ Fillet Tissue EPCs are based on site-wide fillet tissue EPCs for each of the target resident species (Smallmouth bass, Black crappie, Common carp, Brown bullhead), and the available tissue data from the ODHS sampling effort, which are: fillet (with skin) Chinook salmon, whole body Lamprey, and fillet (no skin) Sturgeon.
Numbers presented are rounded values. Sums calculated before rounding.
Chemicals listed for whole body exposure are analytes detected site-wide in whole body tissue samples resident species (smallmouth bass, black crappie, common carp, brown bullhead). chemicals listed for fillet exposure are analytes detected in site-wide fillet tissue samples of resident species.

Exposure Medium Total⁴							1.E-03			3.E+01

Abbreviations:

- = Not evaluated
- CDI = Chronic Daily Intake
- DDD = Dichlorodiphenyldichloroethane
- DDE = Dichlorodiphenyldichloroethylene
- DDT = Dichlorodiphenyltrichloroethane
- EPC = Exposure Point Concentration
- g/day = grams per day
- LADI = Lifetime Average Daily Intake
- mg/kg = milligrams per kilogram
- mg/kg-day = milligrams per kilogram per day
- NA = Not Applicable. Lead not evaluated by same risk assessment process.
- ng/kg = nanograms per kilogram
- PCB = Polychlorinated Biphenyls
- RfD = Reference Dose
- TEQ = Toxic Equivalents
- ug/kg = micrograms per kilogram
- WB = Whole body

Notes: ³ The Native American multi-species fish diet EPCs were calculated assuming different ingestion rates for each of seven fish species, which can also be represented by that species' percent of total fish diet. The EPCs shown in the table are the weighted sums of the EPCs for the individual species based on the following percentages:

- (38.4% x Salmon EPC)
- + (7.0% x Lamprey EPC)
- + (4.9% x Sturgeon EPC)
- + (12.4% x Smallmouth Bass EPC)
- + (12.4% x Black Crappie EPC)
- + (12.4% x Common Carp EPC)
- + (12.4% x Brown Bullhead EPC)

100% Native American fish tissue diet EPC

These percentages are the ingestion rates for each species as discussed in the Portland Harbor RI/FS Programmatic Work Plan, Appendix C: Human Health Risk Assessment Approach, LWG, 2004.

^b Whole Body Tissue EPCs are based on site-wide whole body EPCs for each of the target resident species (Smallmouth bass, Black crappie, Common carp, Brown bullhead), and the available tissue data from the ODHS sampling effort, which are: whole body Chinook salmon, whole body Lamprey, and fillet tissue (no skin) Sturgeon.

^c Cumulative risk sums calculated using PCB congener data when available, and PCB aroclor data when congener data not available.

^d Fillet Tissue EPCs are based on site-wide fillet tissue EPCs for each of the target resident species (Smallmouth bass, Black crappie, Common carp, Brown bullhead), and the available tissue data from the ODHS sampling effort, which are: fillet (with skin) Chinook salmon, whole body Lamprey, and fillet (no skin) Sturgeon.

Numbers presented are rounded values. Sums calculated before rounding.

Chemicals listed for whole body exposure are analytes detected site-wide in whole body tissue samples resident species (smallmouth bass, black crappie, common carp, brown bullhead). chemicals listed for fillet exposure are analytes detected in site-wide fillet tissue samples of resident species.

Table 5-33.
 Calculation of Cancer Risks and Noncancer Hazards - Child Native American Fish Consumption, Multi-Species Diet
 95 UCL or Maximum Exposure

Scenario Timeframe: Current/Future
 Receptor Population: Native American Fisher (Multi-Species Diet)
 Population Age: Child
 Exposure Medium: Multi-Species Fish Tissue
 Exposure Route: Ingestion

Exposure Medium	Exposure Point	Chemical of Potential Concern	EPC for mixed diet ¹		Cancer Risk Calculations			Noncancer Hazard Calculations		
			Value	Units	Oral Cancer Slope Factor (mg/kg-day) ¹	Ingestion Rate: 73 g/day		Oral RfD mg/kg-day	Ingestion Rate: 73 g/day	
						LADI (mg/kg-day)	Cancer Risk		CDI mg/kg-day	Noncancer Hazard Quotient
		Total DDE	2.8E+01	ug/kg	3.4E-01	1.2E-05	4.E-06	5.0E-04	1.4E-04	3.E-01
		Total DDT	1.5E+01	ug/kg	3.4E-01	6.1E-06	2.E-06	5.0E-04	7.2E-05	1.E-01
		Total Chlordane	2.4E+00	ug/kg	3.5E-01	9.9E-07	3.E-07	5.0E-04	1.2E-05	2.E-02
		Total Endosulfan	2.7E+00	ug/kg	--	1.1E-06	--	6.0E-03	1.3E-05	2.E-03
Exposure Medium Total³							4.E-04			9.E+01

Abbreviations:

- = Not evaluated
- CDI = Chronic Daily Intake
- DDD = Dichlorodiphenyldichloroethane
- DDE = Dichlorodiphenyldichloroethylene
- DDT = Dichlorodiphenyltrichloroethane
- EPC = Exposure Point Concentration
- g/day = grams per day
- LADI = Lifetime Average Daily Intake
- mg/kg = milligrams per kilogram
- mg/kg-day = milligrams per kilogram per day
- NA = Not Applicable. Lead not evaluated by same risk assessment process.
- ng/kg = nanograms per kilogram
- PCB = Polychlorinated Biphenyls
- RfD = Reference Dose
- TEQ = Toxic Equivalents
- ug/kg = micrograms per kilogram
- WB = Whole body

Notes:

¹ The Native American multi-species fish diet EPCs were calculated assuming different ingestion rates for each of seven fish species, which can also be represented by that species' percent of total fish diet. The EPCs shown in the table are the weighted sums of the EPCs for the individual species based on the following percentages:
 (38.4% x Salmon EPC)
 + (7.0% x Lamprey EPC)
 + (4.9% x Sturgeon EPC)
 + (12.4% x Smallmouth Bass EPC)
 + (12.4% x Black Crappie EPC)
 + (12.4% x Common Carp EPC)
 + (12.4% x Brown Bullhead EPC)
 100% Native American fish tissue diet EPC

² Whole Body Tissue EPCs are based on site-wide whole body EPCs for each of the target resident species (Smallmouth bass, Black crappie, Common carp, Brown bullhead), and the available tissue data from the ODHS sampling effort, which are: whole body Chinook salmon, whole body Lamprey, and fillet tissue (no skin) Sturgeon.

³ Cumulative risk sums calculated using PCB congener data when available, and PCB aroclor data when congener data not available.

⁴ Fillet Tissue EPCs are based on site-wide fillet tissue EPCs for each of the target resident species (Smallmouth bass, Black crappie, Common carp, Brown bullhead), and the available tissue data from the ODHS sampling effort, which are: fillet (with skin) Smallmouth bass, Black crappie, Common carp, Brown bullhead, and the available tissue data from the ODHS sampling effort, which are: fillet (with skin) Smallmouth bass, Black crappie, Common carp, Brown bullhead.
 Numbers presented are rounded values. Sums calculated before rounding.

Chemicals listed for whole body exposure are analytes detected site-wide in whole body tissue samples of target resident fish species (smallmouth bass, black crappie, common carp, brown bullhead). Chemicals listed for fillet exposure are analytes detected in site-wide fillet tissue samples of target fish species.

Table 5-34.
Calculation of Cancer Risks and Noncancer Hazards - Child Native American Fish Consumption, Multi-Species Diet
Mean Exposure

Scenario Timeframe: Current/Future
Receptor Population: Native American Fisher (Multi- Species Diet)
Population Age: Child
Exposure Medium Multi-Species Fish Tissue
Exposure Route: Ingestion

Exposure Medium	Exposure Point	Chemical of Potential Concern	EPC for mixed diet ^a		Cancer Risk Calculations			Noncancer Hazard Calculations

		Total Endosulfan	1.3E+00	ug/kg	--	5.5E-07	--	6.0E-03	6.4E-06	1.E-03
Exposure Medium Total ²							2.E-04			5.E+01

Abbreviations:

- = Not evaluated
- CDI = Chronic Daily Intake
- DDD = Dichlorodiphenyldichloroethane
- DDE = Dichlorodiphenyldichloroethylene
- DDT = Dichlorodiphenyltrichloroethane
- EPC = Exposure Point Concentration
- g/day = grams per day
- LADI = Lifetime Average Daily Intake
- mg/kg = milligrams per kilogram
- mg/kg-day = milligrams per kilogram per day
- NA = Not Applicable. Lead not evaluated by same risk assessment process.
- ng/kg = nanograms per kilogram
- PCB = Polychlorinated Biphenyls
- RfD = Reference Dose
- TEQ = Toxic Equivalents
- ug/kg = micrograms per kilogram
- WB = Whole body

Notes:

¹ The Native American multi-species fish diet EPCs were calculated assuming different ingestion rates for each of seven fish species, which can also be represented by that species' percent of total fish diet. The EPCs shown in the table are the weighted sums of the EPCs for the individual species based on the following percentages:
 (38.4% x Salmon EPC)
 + (7.0% x Lamprey EPC)
 + (4.9% x Sturgeon EPC)
 + (12.4% x Smallmouth Bass EPC)
 + (12.4% x Black Crappie EPC)
 + (12.4% x Common Carp EPC)
 + (12.4% x Brown Bullhead EPC)
 100% Native American fish tissue diet EPC

These percentages are the ingestion rates for each species as discussed in the Portland Harbor RI/FS Programmatic Work Plan, Appendix C: Human Health Risk Assessment Approach, LWG, 2004.

² Whole Body Tissue EPCs are based on site-wide whole body EPCs for each of the target resident species (Smallmouth bass, Black crappie, Common carp, Brown bullhead), and the available tissue data from the ODHS sampling effort, which are: whole body Chinook salmon, whole body Lamprey, and fillet tissue (no skin) Sturgeon.

³ Cumulative risk sums calculated using PCB congener data when available, and PCB aroclor data when congener data not available, carp, Brown bullhead), and the available tissue data from the ODHS sampling effort, which are: fillet (with and without skin) and whole body Chinook salmon, whole body Lamprey, and fillet (no skin) Sturgeon.

Numbers presented are rounded values. Sums calculated before rounding.

Chemicals listed for whole body exposure are analytes detected site-wide in whole body tissue samples of target resident fish species (smallmouth bass, black crappie, common carp, brown bullhead). Chemicals listed for fillet exposure are analytes detected in site-wide fillet tissue samples of target fish species.

Table 5-35.
Calculation of Cancer Risks and Noncancer Hazards - Adult Non-Tribal Fish Consumption, Single Species Diet, Smallmouth Bass
95 UCL or Maximum Exposure

Scenario Timeframe: Current/Future
Receptor Population: Non-tribal Fisher (Single Species Diet)

Exposure Medium Total																		

Notes:

- ^a = Toxicity Values for trivalent Chromium used to assess total Chromium.
- ^b = Risk from PCB congeners was included in cumulative risk calculations for tissue, aroclor risk was not. If congener data not available or not detected for a specific exposure point, risk from aroclors was included in cumulative risk for that exposure point.

Numbers presented are rounded values. Sums calculated before rounding.
Chemicals listed are analytes detected in smallmouth bass tissue.

Abbreviations:

- = Not evaluated
- CDI = Chronic Daily Intake
- DDD = Dichlorodiphenyldichloroethane
- DDE = Dichlorodiphenyldichloroethylene
- DDT = Dichlorodiphenyltrichloroethane
- EPC = Exposure Point Concentration
- g/day = grams per day
- LADI = Lifetime Average Daily Intake
- mg/kg = milligrams per kilogram
- mg/kg-day = milligrams per kilogram per day
- NA = Not Applicable. Lead evaluated using different model.
- ng/kg = nanograms per kilogram
- PAHs = Polynuclear Aromatic Hydrocarbons
- PCB = Polychlorinated Biphenyls
- RfD = Reference Dose
- RM = River Mile
- SIL = Swan Island Lagoon
- TEQ = Toxic Equivalents
- ug/kg = micrograms per kilogram
- WB = Whole Body

Exposure Medium Total																		

Notes: ^a = Toxicity Values for trivalent Chromium used to assess total Chromium.
^b = Risk from PCB congeners was included in cumulative risk calculations for tissue, aroclor risk was not.
If congener data not available or not detected for a specific exposure point, risk from aroclors was included in cumulative risk for that exposure point.
Numbers presented are rounded values. Sums calculated before rounding.
Chemicals listed are analytes detected in smallmouth bass tissue.

Abbreviations:

- = Not evaluated
- CDI = Chronic Daily Intake
- DDD = Dichlorodiphenyldichloroethane
- DDE = Dichlorodiphenyldichloroethylene
- DDT = Dichlorodiphenyltrichloroethane
- EPC = Exposure Point Concentration
- g/day = grams per day
- LADI = Lifetime Average Daily Intake
- mg/kg = milligrams per kilogram
- mg/kg-day = milligrams per kilogram per day
- NA = Not Applicable. Lead evaluated using different model.
- ng/kg = nanograms per kilogram
- PAHs = Polynuclear Aromatic Hydrocarbons
- PCB = Polychlorinated Biphenyls
- RfD = Reference Dose
- RM = River Mile
- SIL = Swan Island Lagoon
- TEQ = Toxic Equivalents
- ug/kg = micrograms per kilogram
- WB = Whole Body

						2.E-03			1.E-03		3.E-04		1.E+02		7.E+01		2.E+01		

Notes:

- ^a = Toxicity Values for trivalent Chromium used to assess total Chromium.
- ^b = Risk from PCB congeners was included in cumulative risk calculations for tissue, aroclor risk was not. If congener data not available or not detected for a specific exposure point, risk from aroclors was included in cumulative risk for that exposure point.

Numbers presented are rounded values. Sums calculated before rounding.
Chemical list includes analytes detected in carp tissue.

Abbreviations:

- = Not evaluated
- CDI = Chronic Daily Intake
- DDD = Dichlorodiphenyldichloroethane
- DDE = Dichlorodiphenyldichloroethylene
- DDT = Dichlorodiphenyltrichloroethane
- EPC = Exposure Point Concentration
- g/day = grams per day
- LADI = Lifetime Average Daily Intake
- mg/kg = milligrams per kilogram
- mg/kg-day = milligrams per kilogram per day
- NA = Not Applicable. Lead evaluated using different model.
- ng/kg = nanograms per kilogram
- PAHs = Polynuclear Aromatic Hydrocarbons
- PCB = Polychlorinated Biphenyls
- RfD = Reference Dose
- RM = River Mile
- TEQ = Toxic Equivalents
- ug/kg = micrograms per kilogram
- WB = Whole Body

Notes:

- ^a = Toxicity Values for trivalent Chromium used to assess total Chromium.
- ^b = Risk from PCB congeners was included in cumulative risk calculations for tissue, aroclor risk was not.
- If congener data not available or not detected for a specific exposure point, risk from aroclors was included in cumulative risk for that exposure point.
- Numbers presented are rounded values. Sums calculated before rounding.
- Chemical list includes analytes detected in carp tissue.

Abbreviations:

- = Not evaluated
- CDI = Chronic Daily Intake
- DDD = Dichlorodiphenyldichloroethane
- DDE = Dichlorodiphenyldichloroethylene
- DDT = Dichlorodiphenyltrichloroethane
- EPC = Exposure Point Concentration
- g/day = grams per day
- LADI = Lifetime Average Daily Intake
- mg/kg = milligrams per kilogram
- mg/kg-day = milligrams per kilogram per day
- NA = Not Applicable. Lead evaluated using different model.
- ng/kg = nanograms per kilogram
- PAHs = Polynuclear Aromatic Hydrocarbons
- PCB = Polychlorinated Biphenyls
- RfD = Reference Dose
- RM = River Mile
- TEQ = Toxic Equivalents
- ug/kg = micrograms per kilogram
- WB = Whole Body

Exposure Medium Total																		

Notes:
^a = Toxicity Values for trivalent Chromium used to assess total Chromium.
^b = Risk from PCB congeners was included in cumulative risk calculations for tissue, aroclor risk was not.
 If congener data not available or not detected for a specific exposure point, risk from aroclors was included in cumulative risk for that exposure point.
 Numbers presented are rounded values. Sums calculated before rounding.
 Chemical list includes analytes detected in brown bullhead tissue.

Abbreviations:
 -- = Not evaluated
 CDI = Chronic Daily Intake
 DDD = Dichlorodiphenyldichloroethane
 DDE = Dichlorodiphenyldichloroethylene
 DDT = Dichlorodiphenyltrichloroethane
 EPC = Exposure Point Concentration
 g/day = grams per day
 LADI = Lifetime Average Daily Intake
 mg/kg = milligrams per kilogram
 mg/kg-day = milligrams per kilogram per day
 NA = Not Applicable. Lead evaluated using different model.
 ng/kg = nanograms per kilogram
 PAHs = Polynuclear Aromatic Hydrocarbons
 PCB = Polychlorinated Biphenyls
 RfD = Reference Dose
 RM = River Mile
 TEQ = Toxic Equivalents
 ug/kg = micrograms per kilogram
 WB = Whole Body

Table 5-41.
Calculation of Cancer Risks and Noncancer Hazards - Adult Non-Tribal Fish Consumption, Single Species Diet, Black Crappie
95 UCL or Maximum Exposure

Scenario Timeframe: Current/Future
Receptor Population: Non-tribal Fisher (Single Species Diet)
Population Age: Adult
Exposure Medium: Black Crappie Tissue (Whole Body and Fillet)
Exposure Route: Ingestion

Exposure Medium	Exposure Point	Chemical of Potential Concern	EPC		Cancer Risk Calculations						Noncancer Hazard Calculations							
					Oral Cancer Slope Factor (mg/kg-day) ⁻¹	Ingestion Rate: 142 g/day		Ingestion Rate: 73.5 g/day		Ingestion Rate: 17.5 g/day		Oral RfD (mg/kg-day)	Ingestion Rate: 142 g/day		Ingestion Rate: 73.5 g/day		Ingestion Rate: 17.5 g/day	
						LADI (mg/kg-day)	Cancer Risk	LADI (mg/kg-day)	Cancer Risk	LADI (mg/kg-day)	Cancer Risk		CDI (mg/kg-day)	Noncancer Hazard Quotient	CDI (mg/kg-day)	Noncancer Hazard Quotient	CDI (mg/kg-day)	Noncancer Hazard Quotient

Notes:
^a = Toxicity Values for trivalent Chromium used to assess total Chromium.
^b = Risk from PCB congeners was included in cumulative risk calculations for tissue, aroclor risk was not.
 If congener data not available or not detected for a specific exposure point, risk from aroclors was included in cumulative risk for that exposure point.
 Numbers presented are rounded values. Sums calculated before rounding.
 Chemical list includes analytes detected in black crappie tissue.

Abbreviations:
 -- = Not evaluated
 CDI = Chronic Daily Intake
 DDD = Dichlorodiphenyldichloroethane
 DDE = Dichlorodiphenyldichloroethylene
 DDT = Dichlorodiphenyltrichloroethane
 EPC = Exposure Point Concentration
 g/day = grams per day
 LADI = Lifetime Average Daily Intake
 mg/kg = milligrams per kilogram
 mg/kg-day = milligrams per kilogram per day
 NA = Not Applicable. Lead evaluated using different model.
 ng/kg = nanograms per kilogram
 PAHs = Polynuclear Aromatic Hydrocarbons
 PCB = Polychlorinated Biphenyls
 RfD = Reference Dose
 RM = River Mile
 TEQ = Toxic Equivalents
 ug/kg = micrograms per kilogram
 WB = Whole Body

Table 5-42.
Calculation of Cancer Risks and Noncancer Hazards - Adult Non-Tribal Fish Consumption, Single Species Diet, Black Crappie
Mean Exposure

Scenario Timeframe: Current/Future
Receptor Population: Non-tribal Fisher (Single Species Diet)
Population Age: Adult
Exposure Medium: Black Crappie Tissue (Whole Body and Fillet)
Exposure Route: Ingestion

Exposure Medium	Exposure Point	Chemical of Potential Concern	EPC		Cancer Risk Calculations						Noncancer Hazard Calculations							
					Oral Cancer Slope Factor (mg/kg-day) ⁻¹	Ingestion Rate: 142 g/day		Ingestion Rate: 73.5 g/day		Ingestion Rate: 17.5 g/day		Oral RfD (mg/kg-day)	Ingestion Rate: 142 g/day		Ingestion Rate: 73.5 g/day		Ingestion Rate: 17.5 g/day	
						LADI (mg/kg-day)	Cancer Risk	LADI (mg/kg-day)	Cancer Risk	LADI (mg/kg-day)	Cancer Risk		CDI (mg/kg-day)	Noncancer Hazard Quotient	CDI (mg/kg-day)	Noncancer Hazard Quotient	CDI (mg/kg-day)	Noncancer Hazard Quotient

Notes:

- ^a = Toxicity Values for trivalent Chromium used to assess total Chromium.
 - ^b = Risk from PCB congeners was included in cumulative risk calculations for tissue, arcolol risk was not. If congener data not available or not detected for a specific exposure point, risk from arcolols was included in cumulative risk for that exposure point.
- Numbers presented are rounded values. Sums calculated before rounding.
Chemical list includes analytes detected in black crappie tissue.

Abbreviations:

- = Not evaluated
- CDI = Chronic Daily Intake
- DDD = Dichlorodiphenyldichloroethane
- DDE = Dichlorodiphenyldichloroethylene
- DDT = Dichlorodiphenyltrichloroethane
- EPC = Exposure Point Concentration
- g/day = grams per day
- LADI = Lifetime Average Daily Intake
- mg/kg = milligrams per kilogram
- mg/kg-day = milligrams per kilogram per day
- NA = Not Applicable. Lead evaluated using different model.
- ng/kg = nanograms per kilogram
- PAHs = Polynuclear Aromatic Hydrocarbons
- PCB = Polychlorinated Biphenyls
- RFD = Reference Dose
- RM = River Mile
- TEQ = Toxic Equivalents
- ug/kg = micrograms per kilogram
- WB = Whole Body

Notes:

^a EPC for multi-species diet = 25% site-wide Smallmouth bass EPC + 25% site-wide Black crappie EPC + 25% site-wide Common carp EPC + 25% site-wide Brown bullhead EPC. EPCs for multi-species diet were calculated assuming each of the four target fish species (Smallmouth bass, Black crappie, Common carp, and Brown bullhead) represent 1/4 of a person's diet, according to the Portland Harbor RI/FS Programmatic Work Plan, Appendix C: Human Health Risk Assessment Approach, LWG, 2004.

^b = Risk from PCB congeners was included in cumulative risk calculations for tissue, aroclor risk was not. If congener data not available or not detected for a specific exposure point, risk from aroclors was included in cumulative risk for that exposure point. Numbers presented are rounded values. Sums calculated before rounding. Chemical list includes analytes detected in any of the four target fish species for human health.

Abbreviations:

- WB = Whole Body
- = Not evaluated
- CDI = Chronic Daily Intake
- DDD = Dichlorodiphenyldichloroethane
- DDE = Dichlorodiphenyldichloroethylene
- DDT = Dichlorodiphenyltrichloroethane
- EPC = Exposure Point Concentration
- g/day = grams per day
- LADI = Lifetime Average Daily Intake
- mg/kg = milligrams per kilogram
- mg/kg-day = milligrams per kilogram per day
- NA = Not Applicable. Lead evaluated using different model.
- ng/kg = nanograms per kilogram
- PAHs = Polynuclear Aromatic Hydrocarbons
- PCB = Polychlorinated Biphenyls
- RfD = Reference Dose
- TEQ = Toxic Equivalents
- ug/kg = micrograms per kilogram

Table 5-45.
Calculation of Cancer Risks and Noncancer Hazards - Child Non-Tribal Fish Consumption, Single Species Diet, Smallmouth Bass
95 UCL or Maximum Exposure

Scenario Timeframe: Current/Future
Receptor Population: Non-Tribal Fisher (Single Species Diet)
Population Age: Child
Exposure Medium: Smallmouth Bass Tissue (Whole Body and Fillet)
Exposure Route: Ingestion

Exposure Medium	Exposure Point	Chemical of Potential Concern	EPC		Cancer Risk Calculations						Noncancer Hazard Calculations								
					Oral Cancer Slope Factor (mg/kg-day) ¹	Ingestion Rate: 60 g/day		Ingestion Rate: 31 g/day		Ingestion Rate: 7 g/day		Oral RID mg/kg-day	Ingestion Rate: 60 g/day		Ingestion Rate: 31 g/day		Ingestion Rate: 7 g/day

Notes: ¹ = Toxicity Values for trivalent Chromium used to assess total Chromium.
² = Risk from PCB congeners was included in cumulative risk calculations for tissue, aryl risk was not.
 If congener data not available or not detected for a specific exposure point, risk from aryls was included in cumulative risk for that exposure point.
 Numbers presented are rounded values. Sums calculated before rounding.
 Chemicals listed are analytes detected in smallmouth bass tissue.

Abbreviations:
 -- = Not evaluated
 CDI = Chronic Daily Intake
 DDD = Dichlorodiphenyldichloroethane
 DDE = Dichlorodiphenyldichloroethylene
 DDT = Dichlorodiphenyltrichloroethane
 EPC = Exposure Point Concentration
 g/day = grams per day
 LADI = Lifetime Average Daily Intake
 mg/kg = milligrams per kilogram
 mg/kg-day = milligrams per kilogram per day
 NA = Not Applicable. Lead evaluated using different model.
 ng/kg = nanograms per kilogram
 PAHs = Polynuclear Aromatic Hydrocarbons
 PCB = Polychlorinated Biphenyls
 RfD = Reference Dose
 RM = River Mile
 SIL = Swan Island Lagoon
 TEO = Toxic Equivalents
 ug/kg = micrograms per kilogram
 WB = Whole Body

LWG
Lower Willamette Group

Notes: ^a = Toxicity Values for trivalent Chromium used to assess total Chromium.

^b = Risk from PCB congeners was included in cumulative risk calculations for tissue, aroclor risk was not.
If congener data not available or not detected for a specific exposure point, risk from aroclors was included in cumulative risk for that exposure point.
Numbers presented are rounded values. Sums calculated before rounding.
Chemicals listed are analytes detected in smallmouth bass tissue.

Abbreviations:

- = Not evaluated
- CDI = Chronic Daily Intake
- DDD = Dichlorodiphenyldichloroethane
- DDE = Dichlorodiphenyldichloroethylene
- DDT = Dichlorodiphenyltrichloroethane
- EPC = Exposure Point Concentration
- g/day = grams per day
- LADI = Lifetime Average Daily Intake
- mg/kg = milligrams per kilogram
- mg/kg-day = milligrams per kilogram per day
- NA = Not Applicable. Lead evaluated using different model.
- ng/kg = nanograms per kilogram
- PAHs = Polynuclear Aromatic Hydrocarbons
- PCB = Polychlorinated Biphenyls
- RfD = Reference Dose
- RM = River Mile
- SIL = Swan Island Lagoon
- TEQ = Toxic Equivalents
- ug/kg = micrograms per kilogram
- WB = Whole Body

Notes:
^a = Toxicity Values for trivalent Chromium used to assess total Chromium.
^b = Risk from PCB congeners was included in cumulative risk calculations for tissue, aroclor risk was not.
 If congener data not available or not detected for a specific exposure point, risk from aroclors was included in cumulative risk for that exposure point.
 Numbers presented are rounded values. Sums calculated before rounding.
 Chemical list includes analytes detected in carp tissue.

Abbreviations:
 -- = Not evaluated
 CDI = Chronic Daily Intake
 DDD = Dichlorodiphenyldichloroethane
 DDE = Dichlorodiphenyldichloroethylene
 DDT = Dichlorodiphenyltrichloroethane
 EPC = Exposure Point Concentration
 g/day = grams per day
 LADI = Lifetime Average Daily Intake
 mg/kg = milligrams per kilogram
 mg/kg-day = milligrams per kilogram per day
 NA = Not Applicable. Lead evaluated using different model.
 ng/kg = nanograms per kilogram
 PAHs = Polynuclear Aromatic Hydrocarbons
 PCB = Polychlorinated Biphenyls
 RfD = Reference Dose

 RM = River Mile
 TEQ = Toxic Equivalents
 ug/kg = micrograms per kilogram
 WB = Whole Body

Notes:

- ^a = Toxicity Values for trivalent Chromium used to assess total Chromium.
- ^b = Risk from PCB congeners was included in cumulative risk calculations for tissue, aroclor risk was not. If congener data not available or not detected for a specific exposure point, risk from aroclors was included in cumulative risk for that exposure point. Numbers presented are rounded values. Sums calculated before rounding. Chemical list includes analytes detected in carp tissue.

Abbreviations:

- = Not evaluated
- CDI = Chronic Daily Intake
- DDD = Dichlorodiphenyldichloroethane
- DDE = Dichlorodiphenyldichloroethylene
- DDT = Dichlorodiphenyltrichloroethane
- EPC = Exposure Point Concentration
- g/day = grams per day
- LADI = Lifetime Average Daily Intake
- mg/kg = milligrams per kilogram
- mg/kg-day = milligrams per kilogram per day
- NA = Not Applicable. Lead evaluated using different model.
- ng/kg = nanograms per kilogram
- PAHs = Polynuclear Aromatic Hydrocarbons
- PCB = Polychlorinated Biphenyls
- RfD = Reference Dose
- RM = River Mile
- TEQ = Toxic Equivalents
- ug/kg = micrograms per kilogram
- WB = Whole Body

Notes:

¹ = Toxicity Values for trivalent Chromium used to assess total Chromium.

² = Risk from PCB congeners was included in cumulative risk calculations for tissue, aroclor risk was not.

If congener data not available or not detected for a specific exposure point, risk from aroclors was included in cumulative risk for that exposure point.

Numbers presented are rounded values. Sums calculated before rounding.

Chemical list includes analytes detected in brown bullhead tissue.

Abbreviations:

- = Not evaluated
- CDI = Chronic Daily Intake
- DDD = Dichlorodiphenyldichloroethane
- DDE = Dichlorodiphenyldichloroethylene
- DDT = Dichlorodiphenyltrichloroethane
- EPC = Exposure Point Concentration
- g/day = grams per day
- LADI = Lifetime Average Daily Intake
- mg/kg = milligrams per kilogram
- mg/kg-day = milligrams per kilogram per day
- NA = Not Applicable. Lead evaluated using different model.
- ng/kg = nanograms per kilogram
- PAHs = Polynuclear Aromatic Hydrocarbons
- PCB = Polychlorinated Biphenyls
- RD = Reference Dose

- RM = River Mile
- TEQ = Toxic Equivalents
- ug/kg = micrograms per kilogram
- WB = Whole Body

Table 5-50.
Calculation of Cancer Risks and Noncancer Hazards - Child Non-Tribal Fish Consumption, Single Species Diet, Brown Bullhead
Mean Exposure

Scenario Timeframe: Current/Future
Receptor Population: Non-tribal Fisher (Single Species Diet)
Population Age: Child
Exposure Medium: Brown Bullhead Tissue (Whole Body and Fillet)
Exposure Route: Ingestion

Notes:

- ^a = Toxicity Values for trivalent Chromium used to assess total Chromium.
 - ^b = Risk from PCB congeners was included in cumulative risk calculations for tissue, aroclor risk was not. If congener data not available or not detected for a specific exposure point, risk from aroclors was included in cumulative risk for that exposure point.
- Numbers presented are rounded values. Sums calculated before rounding.
Chemical list includes analytes detected in black crappie tissue.

Abbreviations:

- = Not evaluated
- CDI = Chronic Daily Intake
- DDD = Dichlorodiphenyldichloroethane
- DDE = Dichlorodiphenyldichloroethylene
- DDT = Dichlorodiphenyltrichloroethane
- EPC = Exposure Point Concentration
- g/day = grams per day
- LADI = Lifetime Average Daily Intake
- mg/kg = milligrams per kilogram
- mg/kg-day = milligrams per kilogram per day
- NA = Not Applicable. Lead evaluated using different model.
- ng/kg = nanograms per kilogram
- PAHs = Polynuclear Aromatic Hydrocarbons
- PCB = Polychlorinated Biphenyls
- RfD = Reference Dose
- RM = River Mile
- TEQ = Toxic Equivalents
- ug/kg = micrograms per kilogram
- WB = Whole Body

Table 5-52.

Calculation of Cancer Risks and Noncancer Hazards - Child Non-Tribal Fish Consumption, Single Species Diet, Black Crappie Mean Exposure

Scenario Timeframe: Current/Future
Receptor Population: Non-tribal Fisher (Single Species Diet)
Population Age: Child
Exposure Medium: Black Crappie Tissue (Whole Body and Fillet)
Exposure Route: Ingestion

Exposure Medium	Exposure Point	Chemical of Potential Concern	EPC		Cancer Risk Calculations						Noncancer Hazard Calculations							
					Oral Cancer Slope Factor (mg/kg-day) ⁻¹	Ingestion Rate: 60 g/day		Ingestion Rate: 31 g/day		Ingestion Rate: 7 g/day		Oral RfD (mg/kg-day)	Ingestion Rate: 60 g/day		Ingestion Rate: 31 g/day		Ingestion Rate: 7 g/day	
						LADI (mg/kg-day)	Cancer Risk	LADI (mg/kg-day)	Cancer Risk	LADI (mg/kg-day)	Cancer Risk		CDI (mg/kg-day)	Noncancer Hazard Quotient	CDI (mg/kg-day)	Noncancer Hazard Quotient	CDI (mg/kg-day)	Noncancer Hazard Quotient

Notes:

- ^a = Toxicity Values for trivalent Chromium used to assess total Chromium.
- ^b = Risk from PCB congeners was included in cumulative risk calculations for tissue, aroclor risk was not. If congener data not available or not detected for a specific exposure point, risk from aroclors was included in cumulative risk for that exposure point. Numbers presented are rounded values. Sums calculated before rounding. Chemical list includes analytes detected in black crappie tissue.

Abbreviations:

- = Not evaluated
- CDI = Chronic Daily Intake
- DDD = Dichlorodiphenyldichloroethane
- DDE = Dichlorodiphenyldichloroethylene
- DDT = Dichlorodiphenyltrichloroethane
- EPC = Exposure Point Concentration
- g/day = grams per day
- LADI = Lifetime Average Daily Intake
- mg/kg = milligrams per kilogram
- mg/kg-day = milligrams per kilogram per day
- NA = Not Applicable. Lead evaluated using different model.
- ng/kg = nanograms per kilogram
- PAHs = Polynuclear Aromatic Hydrocarbons
- PCB = Polychlorinated Biphenyls
- RfD = Reference Dose
- RM = River Mile
- TEQ = Toxic Equivalents
- ug/kg = micrograms per kilogram
- WB = Whole Body

Notes:

^a EPC for multi-species diet = 25% site-wide Smallmouth bass EPC + 25% site-wide Black crappie EPC + 25% site-wide Common carp EPC + 25% site-wide Brown bullhead EPC.

EPCs for multi-species diet were calculated assuming each of the four target fish species (Smallmouth bass, Black crappie, Common carp, and Brown bullhead) represent 1/4 of a person's diet, according to the Portland Harbor RI/FS Programmatic Work Plan, Appendix C: Human Health Risk Assessment Approach, LWG, 2004.

^b = Risk from PCB congeners was included in cumulative risk calculations for tissue, aroclor risk was not. If congener data not available or not detected for a specific exposure point, risk from aroclors was included in cumulative risk for that exposure point.

Numbers presented are rounded values. Sums calculated before rounding.

Chemical list includes analytes detected in any of the four target fish species for human health.

Abbreviations:

- WB = Whole Body
- = Not evaluated
- CDI = Chronic Daily Intake
- DDD = Dichlorodiphenyldichloroethane
- DDE = Dichlorodiphenyldichloroethylene
- DDT = Dichlorodiphenyltrichloroethane
- EPC = Exposure Point Concentration
- g/day = grams per day
- LADI = Lifetime Average Daily Intake
- mg/kg = milligrams per kilogram
- mg/kg-day = milligrams per kilogram per day
- NA = Not Applicable. Lead evaluated using different model.
- ng/kg = nanograms per kilogram
- PAHs = Polynuclear Aromatic Hydrocarbons
- PCB = Polychlorinated Biphenyls
- RfD = Reference Dose
- TEQ = Toxic Equivalents
- ug/kg = micrograms per kilogram

Exposure Point Total ^a						5.E-04		9.E-05			5.E+00		9.E-01	

Notes:

- ^a = Toxicity Values for trivalent Chromium used to assess Chromium.
- ^b = Risk from PCB congeners was included in cumulative risk calculations for tissue.
If congener data not available or not detected for a specific exposure point, risk from aroclors was included in cumulative risk for that exposure point.
Numbers presented are rounded values. Sums calculated before rounding.
Chemicals listed are those detected in clam tissue.

Abbreviations:

- = Not Applicable
- CDI = Chronic Daily Intake
- cm = centimeter
- DAw = Dermal Absorption rate for water
- EPC = Exposure Point Concentration
- g/day = grams per day
- kg = kilogram
- l = liter
- LADI = Lifetime Average Daily Intake
- mg = milligram
- NA = Not Analyzed
- NL = Not Listed
- PCB = Polychlorinated Biphenyls
- RfD = Reference Dose
- TEQ = Toxic Equivalents
- ug = micrograms

Exposure Point Total ^a						2.E-04		4.E-05			5.E+00		9.E-01

Notes:

^a = Toxicity Values for trivalent Chromium used to assess total Chromium.

^b = Risk from PCB congeners was included in cumulative risk calculations for tissue, aroclor risk was not.

If congener data not available or not detected for a specific exposure point, risk from aroclors was included in cumulative risk for that exposure point.

Numbers presented are rounded values. Sums calculated before rounding.

Chemicals listed are those detected in clam tissue.

Abbreviations: -- = Not Applicable

- CDI = Chronic Daily Intake
- cm = centimeter
- DAw = Dermal Absorption rate for water
- EPC = Exposure Point Concentration
- g/day = grams per day
- kg = kilogram
- l = liter
- LADI = Lifetime Average Daily Intake
- mg = milligram
- NA = Not Analyzed
- NL = Not Listed
- PCB = Polychlorinated Biphenyls
- RfD = Reference Dose
- TEQ = Toxic Equivalents
- ug = micrograms

Table 5-58.
Calculation of Cancer Risks and Noncancer Hazards - Adult Non-Tribal Fish Consumption, Single Species Diet, Crayfish
Mean Exposure

Scenario Timeframe: Current/Future
Receptor Population: Non-tribal Fisher (Single Species Diet)
Population Age: Adult
Exposure Medium Crayfish Tissue (Whole Body)
Exposure Route: Ingestion

Exposure Medium	Exposure Point	Chemical of Potential Concern	EPC		Cancer Risk Calculations						Noncancer Hazard Calculations			
					Oral Cancer Slope Factor (mg/kg-day) ⁻¹	Ingestion Rate: 18 g/day		Ingestion Rate: 3.3 g/day		Oral RfD (mg/kg-day)	Ingestion Rate: 18 g/day		Ingestion Rate: 3.3 g/day

Table 5-58.
Calculation of Cancer Risks and Noncancer Hazards - Adult Non-Tribal Fish Consumption, Single Species Diet, Crayfish
Mean Exposure

Scenario Timeframe: Current/Future
Receptor Population: Non-tribal Fisher (Single Species Diet)
Population Age: Adult
Exposure Medium Crayfish Tissue (Whole Body)
Exposure Route: Ingestion

Exposure Medium	Exposure Point	Chemical of Potential Concern	EPC		Cancer Risk Calculations						Noncancer Hazard Calculations			
					Oral Cancer Slope Factor (mg/kg-day) ⁻¹	Ingestion Rate: 18 g/day		Ingestion Rate: 3.3 g/day		Oral RfD (mg/kg-day)	Ingestion Rate: 18 g/day		Ingestion Rate: 3.3 g/day	
						LADI (mg/kg-day)	Cancer Risk	LADI (mg/kg-day)	Cancer Risk		CDI (mg/kg-day)	Noncancer Hazard Quotient	CDI (mg/kg-day)	Noncancer Hazard Quotient

Notes: ^a = Toxicity Values for trivalent Chromium used to assess total Chromium.
^b = Cumulative risk calculations include PCB congeners. If congener data not available or not detected for a specific exposure point, risk from Aroclors was included in cumulative risk for that exposure point.
Numbers presented are rounded values. Sums calculated before rounding.
Chemical list includes analytes detected in crayfish tissue.

Abbreviations:
 -- = Not evaluated
 CDI = Chronic Daily Intake
 DDD = Dichlorodiphenyldichloroethane
 DDE = Dichlorodiph
 DDT = Dichlorodiphenyltrichloroethane
 EPC = Exposure Point Concentration
 g/day = grams per day
 LADI = Lifetime Average Daily Intake
 mg/kg = milligrams per kilogram
 mg/kg-day = milligrams per kilogram per day
 NA = Not Applicable. Lead evaluated using different model.
 ng/kg = nanograms per kilogram
 PAHs = Polynuclear Aromatic Hydrocarbons
 PCB = Polychlorinated Biphenyls
 RfD = Reference Dose
 RM = River Mile
 TEQ = Toxic Equivalents
 ug/kg = micrograms per kilogram
 WB = Whole Body

Notes:

- a Receptor Populations include populations assessed for exposure to multiple media in the HHRA.
- b Exposure points listed are the locations of the maximum cumulative cancer risk/non-cancer hazard for the receptor population under reasonable maximum exposure scenarios and high tissue consumption rates (where applicable).
- c Cumulative cancer risks/non-cancer hazards rounded to one significant figure. Sums calculated before rounding.
- d Non-tribal fisher risks/hazards were estimated for multiple fishing frequencies. The highest risk/hazard of all non-tribal fisher scenarios is presented.
- e Non-tribal fish consumption scenario resulting in highest estimated risk/hazard is for consumption whole body tissue, common carp, single-species diet.
- f Non-tribal shellfish consumption scenario resulting in highest estimated risk/hazard is for clam.

Notes:

Bolded cells exceed the minimum EPA target cancer risk level of 1×10^{-6} or the target hazard index of 1.

Highlighted cells exceed the minimum EPA target cancer risk level of 1×10^{-4} or the target hazard index of 1.

The ranges included reflect differences in CT vs RME scenarios, level of fish consumption (high, medium, and low), location of sediment (for beach scenarios), tissue type (whole body vs fillet), and species of fish consumed.

Table 5-61: Initial Chemicals of Concern for Human Health

Notes:

- ^aiCOC status is result of target risk or hazard exceedance for two or fewer exposure points.
- ^biCOC status is result of target risk or hazard exceedance for RME scenario only.
- ^ciCOC status is result of target risk or hazard exceedance only for the high ingestion rate.
- ^diCOC status is result of target risk or hazard exceedance for UCL/max EPCs, but not for mean EPCs.

Abbreviations:

iCOC = initial Chemical of Concern
EPC = Exposure Point Concentration

Table 6-1.
Screening of Surface Water Concentration Estimates Against Human Health Based Screening Levels.

CAS	Chemical	Minimum Concentration (ug/l)	Maximum Concentration (ug/l)	Location of Maximum	Frequency of Detection	Region 9 Tap Water PRG/10 for noncarcinogens (ug/l)	AWQC (for Fish Consumption at 17.5 grams/day) (ug/l)	MCL (ug/l)	Frequency of Detection > 5%	Exceeds PRG?	Exceeds AWQC?	Exceeds MCL?

Notes:

EPA Region 9 PRGs for tap water have been divided by 10 for noncarcinogenic chemicals.

ug/l = Micrograms per liter.

AWQC = Ambient Water Quality Criteria.

CAS = Chemical Abstract Service.

EPA = United States Environmental Protection Agency.

MCL = Maximum Contaminant Level.

N = No.

PRG = Preliminary Remediation Goal.

Y = Yes.

Table 6-2.
Transition Zone Water Screening Against Human Health Based Screening Levels.

CAS	Chemical	Carcinogen	Screening Values:														
			Minimum Concentration (ug/l)	Maximum Concentration (ug/l)	Location of Maximum	Frequency of Detection	Region 9 Tap Water PRG (ug/l)	MCL (ug/l)	AWOC (for Fish Consumption at 17.5 grams/day) (ug/l)	Exceeds PRG or MCL?	Exceeds AWOC?	Frequency of Detection	Magnitude of Exceedance against PRGs	Magnitude of Exceedance against MCLs	Magnitude of Exceedance against AWOC	Maximum Concentration x 5,000 Dilution Factor (ug/l)	Exceeds AWOC?

Notes:
EPA Region 9 PRGs for tap water have not been divided by 10 for noncarcinogenic chemicals.
c = carcinogen.
nc = noncarcinogen.
ug/l = Micrograms per liter.
AWQC = Ambient Water Quality Criteria.
CAS = Chemical Abstract Service.
EPA = United States Environmental Protection Agency.
MCL = Maximum Contaminant Level.
N = No.
PRG = Preliminary Remediation Goal.
Y = Yes.

Shellfish (crayfish or clam) consumption estimated risk exceeds either 10⁻⁶ for cancer risk or 1 for noncancer hazard quotient.

Table 6-3.
Screening of Surface Water Concentration Estimates Against Drinking Water Screening Levels

CAS	Analyte	Peepers and Unfiltered Push Probe ^a	Concentration Estimate, Maximum Flow ^b (ug/l)	Screening Values		
		Load, Maximum Flow (kg/yr)		Region 9 Tap Water PRG/10 for noncarcinogens (ug/l)	MCL (ug/l)	Exceeds PRG or MCL?

Notes:

- ^a Push probe refers to samples collected by either Trident or GeoProbe samplers.
- ^b The concentration estimate is based on a maximum flow of 6901 cubic feet per second.
- EPA Region 9 PRGs for tap water have not been divided by 10 for noncarcinogenic chemicals.
- kg/yr = kilograms per year.
- µg/l = Micrograms per liter.
- AWQC = Ambient Water Quality Criteria.
- CAS = Chemical Abstract Service.
- EPA = United States Environmental Protection Agency.
- MCL = Maximum Contaminant Level.
- N = No.
- NA = Not available.
- PRG = Preliminary Remediation Goal.
- Y = Yes.

Table 7-1. Comparison of Detection Limits of Undetected Analytes in Sediment to LWG Analytical Concentration Goals.

CAS	Analyte	Maximum Detection Limit (ug/kg)	Minimum Detection Limit (ug/kg)	ACG (ug/kg)	MRL (ug/kg)	Max DL>ACG?	Max DL>MRL?
58-90-2	2,3,4,6-Tetrachlorophenol	2150	9.6	157	100	Y	Y

8001-35-2	Toxaphene	9900	4.7	0.0059	20	Y	Y

Notes:

Chemicals listed are those analyzed for but never detected in human health sediment samples, and for which an ACG was established in the Round 2 Quality Assurance Project Plan (Integral and Windward 2004, Table A6-2).

Abbreviations:

ACG = Analytical Concentration Goal.

DL = Detection Limit.

LWG = Lower Willamette Group.

Max = Maximum.

MRL = Maximum Reporting Limit.

ug/kg = microgram per kilogram.

Y = Yes.

LWG

Lower Willamette Group

1.0 UPSTREAM TISSUE DATA ASSESSMENT

Fish tissue samples were collected at two upstream locations as part of the Round 1 sampling effort. This attachment presents a summary of the upstream tissue data as well as the methods that were used to estimate risks from fish consumption based on upstream tissue.

1.1 DATA EVALUATION

Available Data

The upstream sampling effort was initiated at the end of October 2002, which is the same time as the Lower Willamette Group (LWG) Round 1 tissue sampling within the Study Area, which includes river mile (RM) 2 to RM 11. The upstream sampling took place at two locations, one above and one below Willamette Falls. The first location was designated RM 20 and included fish collected between approximately RM 20 to RM 24.5. The second location was designated RM 28 and included fish collected between RM 28 to RM 34.5.

Brown bullhead and smallmouth bass, which are target fish species for the Round 2 human health risk assessment (HHRA), were collected at both upstream sampling locations and were used in this evaluation of upstream tissue. The composite schemes for the upstream samples were developed consistent with the rules that were used in the Study Area whenever possible. A total of six smallmouth bass and three brown bullhead samples were collected and used in this evaluation. A summary of the composite information for those samples is presented in Table 1.

Use of Data

Upstream tissue data were handled in the same manner as tissue data for the Study Area, including the handling of non-detects and summed concentrations for certain analyte groups. The methods are described in Section 2.2 of Appendix F.

Those analytes which resulted in exceedances of 10^{-6} cancer risk or a hazard quotient (HQ) of 1 for any resident species tissue scenario within the Study Area were retained for evaluation in upstream tissue data. Fifteen analytes in upstream tissue were assessed for risk from fish consumption, as shown in Tables 2-9.

1.2 EXPOSURE AND TOXICITY ASSESSMENT

Since upstream data are available for only two resident species, only single-species diet scenarios were assessed using the upstream tissue data (see Appendix F, Section 3.4). The receptor populations and intake parameters were the same as those used in the Round 2 HHRA for single-species diet fish consumption. Risks from consumption of the upstream fish tissue were evaluated using the same ingestion rates and exposure assumptions as the adult and child non-tribal fish consumers, and are discussed in detail in Section 3 of Appendix F.

Exposure point concentrations (EPCs) were calculated for upstream samples combining the two sampling locations into a single exposure area. EPCs were calculated for both the upper confidence limit (UCL) and arithmetic mean, using the same approach as for the tissue collected within the Study Area, which is described in Section 3.5.5 of Appendix F. EPCs for smallmouth bass and brown bullhead are presented in Tables 10 and 11, respectively.

Toxicity values used in the assessment of upstream tissue were the same as those used for the toxicity assessment for the Study Area, and are described in Section 4 of Appendix F.

1.3 RISK CHARACTERIZATION

Estimates for noncancer and cancer health risks were calculated in the same manner as for the Round 2 HHRA, which is described in Section 5.1 of Appendix F. Risk characterization results for upstream tissue are summarized below, and presented in Tables 2 through 9.

The cumulative cancer risks ranged from 2×10^{-5} to 2×10^{-3} . The hazard indices (HIs), which were not endpoint specific, ranged from 0.6 to 70. The cumulative cancer risks are primarily driven by polychlorinated biphenyls (PCBs) and dioxins/furans. In the scenario with the highest HI, the PCB HQ is approximately 3 times higher than the next highest HQ, which is from mercury. PCBs and mercury are the only chemicals with HQs greater than 1 for any of the scenarios. The evaluation of risks from upstream tissue demonstrates that upstream contributions result in cumulative cancer risks that exceed the target risk of 10^{-4} and noncancer hazards that exceed the target HI of 1.

Notes:
* = PCB congeners used in cumulative risk calculations for tissue, Aroclors use for hazard index calculations.
Numbers presented are rounded values. Sums calculated before rounding.

Abbreviations:
-- = Not evaluated.
CDI = Chronic daily intake.
DDD = Dichlorodiphenyldichloroethane.
DDE = Dichlorodiphenyltrichloroethylene.
DDT = Dichlorodiphenyltrichloroethane.
EPC = Exposure point concentration.
LADI = Lifetime average daily intake.
mg/kg = milligrams per kilogram.
PAHs = Polynuclear aromatic hydrocarbons.
PCB = Polychlorinated biphenyls.
RfD = Reference dose.
TEQ = Toxic equivalents.
ug/kg = micrograms per kilogram.
WB = Whole body.

Table 6.
Calculation of Cancer Risks and Noncancer Hazards - Non-tribal Adult Upstream Fish Consumption, Single Species Diet, Brown Bullhead.
Maximum Exposure

Scenario Timeframe: Current/Future
Receptor Population: Non-tribal Fisher (Single Species Diet)
Receptor Age: Adult
Exposure Medium Brown Bullhead Tissue (Whole Body)
Exposure Route: Ingestion

		Exposure Point Total^a																	

Notes:
^a = PCB congeners used in cumulative risk calculations for tissue. Aroclors use for hazard index calculations.
Numbers presented are rounded values. Sums calculated before rounding.

Abbreviations:
-- = Not evaluated.
CDI = Chronic daily intake.
DDD = Dichlorodiphenyldichloroethane.
DDE = Dichlorodiphenyldichloroethylene.
DDT = Dichlorodiphenyltrichloroethane.
EPC = Exposure point concentration.
LADI = Lifetime average daily intake.
mg/kg = milligrams per kilogram.
PAHs = Polynuclear aromatic hydrocarbons.
PCB = Polychlorinated biphenyls.
RfD = Reference dose.
TEQ = Toxic equivalents.
ug/kg = micrograms per kilogram.
WB = Whole body.

Table 9.
Calculation of Cancer Risks and Noncancer Hazards - Non-tribal Child Upstream Fish Consumption, Single Species Diet, Brown Bullhead.
Mean Exposure

Scenario Timeframe: Current/Future
Receptor Population: Non-tribal Fisher (Single Species Diet)
Receptor Age: Child
Exposure Medium Brown Bullhead Tissue (Whole Body)
Exposure Route: Ingestion

Exposure Medium	Exposure Point	Chemical of Potential Concern	EPC		Cancer Risk Calculations						Noncancer Hazard Calculations													
					Oral Cancer Slope Factor (mg/kg-day) ⁻¹	Ingestion Rate: 60 g/day		Ingestion Rate: 31 g/day		Ingestion Rate: 7 g/day		Oral RfD (mg/kg-day)	Ingestion Rate: 60 g/day		Ingestion Rate: 31 g/day		Ingestion Rate: 7 g/day							
						LADI (mg/kg-day)	Cancer Risk	LADI (mg/kg-day)	Cancer Risk	LADI (mg/kg-day)	Cancer Risk		CDI (mg/kg-day)	Noncancer Hazard Quotient	CDI (mg/kg-day)	Noncancer Hazard Quotient	CDI (mg/kg-day)	Noncancer Hazard Quotient

Notes:

^aChemicals listed are those resulting in an estimated cancer risk greater than 10⁻⁶ or an estimated hazard quotient greater than 1 for tissue exposure scenarios within the Study Area.

^b CT and RME exposure parameters are not evaluated for tissue scenarios. Use of CT exposure point concentrations is referred to as mean exposure, and use of RME exposure point concentrations is referred to as 95UCL/Max exposure for the purposes of the Round 2 HHRA.

Abbreviations:

95% UCL = 95% Upper Confidence Limit on the Mean.
 CT = Central Tendency.
 RME = Reasonable Maximum Exposure.
 ug/kg = micrograms per kilogram.
 PCB = Polychlorinated Biphenyl.
 TEQ = Toxic Equivalents.
 DDD = Dichlorodiphenyldichloroethane.
 DDE = Dichlorodiphenyldichloroethylene.
 DDT = Dichlorodiphenyltrichloroethane.
